

Platelet-Rich Plasma

A same-day, drug-free solution for pain, injury, and inflammation.

Platelet-Rich Plasma (PRP) Therapy uses your pet's own platelets to promote tissue repair, reduce inflammation, and support recovery.

PROCESS

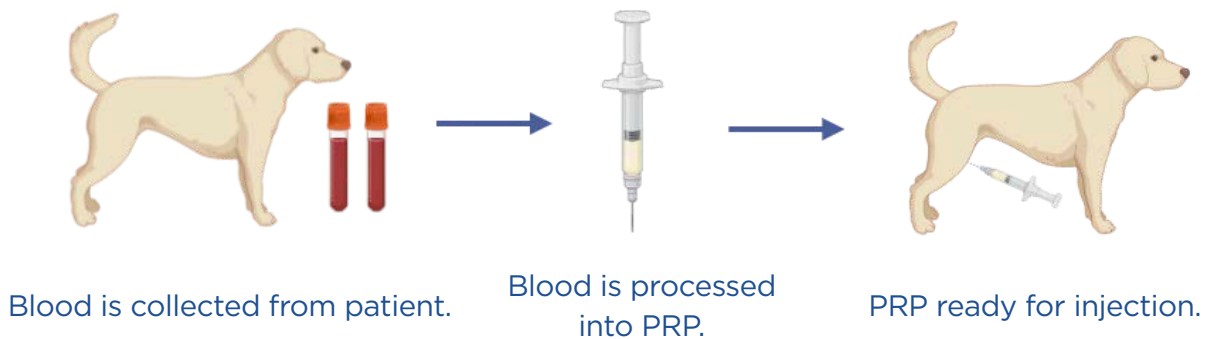

Blood Collection: A small blood sample is drawn from your pet.

On-Site Processing: The blood is processed in the clinic the same day.

Targeted Application: PRP is injected into the area of injury or inflammation.

IMPACT AREAS

Joint Injuries: Offers targeted relief and tissue regeneration.

Soft Tissue Damage: Supports healing of muscle, tendon, or ligament injuries.

Wound Care: Aids in faster recovery for surface wounds.

Post-Surgical Support: Enhances recovery following routine or orthopedic surgeries.

Chronic Inflammation: Reduces long-term pain naturally, without NSAIDs.

WHY PRP THERAPY?

Versatile Use: Can be paired with surgeries or used standalone.

Affordable Relief: A cost-effective alternative to long-term medications.

Same-Day Therapy: PRP is processed and administered in one visit.

All-Natural: Uses your pet's own platelets—no drugs or synthetic materials.
